Thermoplastic Fixation Mask
Catalogue 2012

About Our Products

MU Innovations is very proud of its product line. All of our products have been clinically tested in Sydney and our manufacturer is registered with and subject to strict *ISO 13485:2003*, *CE*, *FDA* and *TGA* registration regulations to ensure your patients receive the best quality products. Our products have a manufacturer's warranty and are subject to all aspects of the *Trade Practices Act*.

Our product line currently focuses on 2.4mm and 3.0mm thermoplastic masks in S-Type and U-Shape frames. This has enabled us to be highly competitive in the Australian and New Zealand markets and as a result, we are able to provide our customers with the best quality product and service at the lowest possible price. All of our masks are 22% perforated to ensure maximum patient stability.

Features of Our Thermoplastic Masks

■ Superior Memory Characteristics

Our masks can be remoulded and reused 3-5 times without significant structural weakening, maintaining mask integrity and stability. Ideal for scheduled IMRT resimulation and unplanned resimulation due to significant patient contour change.

■ Biodegradable and Environmentally Friendly

Our masks are made from Polycaprolactone; a biodegradable polyester that will degrade in soil through naturally occurring biological processes over a period of 16 months.

■ Non-Stick Surface

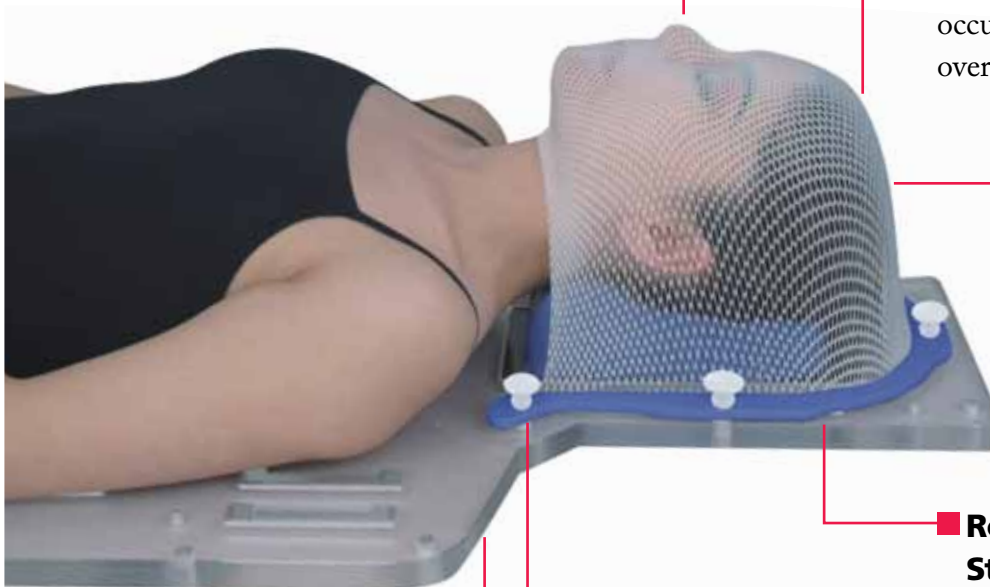

Our masks will not adhere to the patients' skin or hair, and the thermoplastic material will not fold upon or stick to itself.

■ Rounded and Strengthened Edges

The rounded and strengthened edges reduce the risk of harming the patient's skin whilst obtaining a firm and stable fixation.

■ Strong Expanding Bolt Fixation

■ Negligible Absorption or Scatter of Radiation

Product List

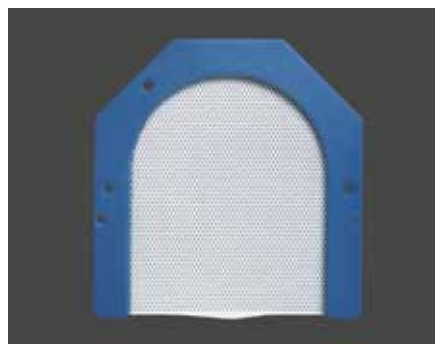

S-Type Head and Shoulder Mask

Model Number	F281B	F283B
Thickness	2.4mm	3mm
Perforation	22%	22%

S-Type Head Only Mask

Model Number	F033B	F035B
Thickness	2.4mm	3mm
Perforation	22%	22%

U-Shape Head Only Mask

Model Number	F003B
Thickness	2.4mm
Perforation	22%

Our product line is suitable for the stabilisation of patients receiving IMRT and 3D Conformal Radiation Therapy Treatments.
